ZoneFlex™ 7761-CM

DUAL-BAND 802.11N SMART WI-FI OUTDOOR AP WITH INTEGRATED DOCSIS 3.0 MODEM

First high performance strand-mounted 802.11n Smart Wi-Fi access point with cable modem

The Ruckus ZoneFlex 7761-CM is a the first purpose-build strand-mounted access point to combine dual-band 802.11n with an integrated DOCSIS 3.0 certified modem and patented smart antenna array technology to deliver un-precedented range and reliability for multiple system cable operators (MSOs).

The Ruckus 7761-CM is lightweight and can be easily installed and integrated with the cable operator's network. It leverages existing cable assets, including mounting, power, backhaul and customer service systems to quickly and easily extend wireless services to cable operators' customers.

The ZoneFlex 7761-CM implements Ruckus-patented BeamFlex™ smart antenna technology that enables consistent, high-performance, extended coverage and multimedia support. Network operators can create different quality of service for various WLANs to provide tiered services.

The ZoneFlex 7761-CM is the industry's first AP to integrate a DOCSIS 3.0 modem supporting 8 downstream and 4 upstream bonded channels with theoretical data rates of up to 340 Mbps (downstream) and 130 Mbps (upstream).

The Ruckus ZoneFlex 7761-CM is ideal for MSOs expanding branded broadband services through their cable infrastructure to provide hotspot services to neighborhoods, resorts, train stations, and other public locations. The 7761-CM delivers broadband services outdoors to extend managed wireless LANs (WLANs) for strand mounted locations and where Ethernet cabling is not feasible.

The ZoneFlex 7761-CM can be centrally managed by the ZoneDirector Smart WLAN controller as part of a unified indoor/outdoor wireless LAN or deployed as a standalone AP and managed individually or through the FlexMaster remote Wi-Fi management system.

BENEFITS

Integrated DOCSIS 3.0 modem with 8 x 4 bonded channels

Ruggedized outdoor enclosure with DOCSIS 3.0 certified modem providing bonded 8 downstream and 4 upstream channels

Unmatched Wi-Fi range and reliability

Adaptive antenna technology with 802.11n (3 x 3) combined with unique interference avoidance technology delivers up to an additional 6 dB of BeamFlex gain in addition to the 5 dBi physical antenna gain to maximize capacity and coverage

Extended coverage means fewer APs

Directional, high-gain antennas dynamically combine to deliver two- to four-times the coverage area compared to typical outdoor APs

Channel selection optimizes throughput

ChannelFly dynamic channel management, based on throughput measurements, not just interference, chooses the best channel to give users the highest throughput

Strand mounted hardened enclosure for outdoor deployment

IP-67 water and dust proof enclosure with strand mount for deployment on MSOs

Enables a myriad of new services and service opportunities

Smart Wi-Fi applied outdoors now enables new revenue-generating services such as community Wi-Fi, IP-video applications, multimedia hotspots, extended WLAN services outdoors and 3G data offloading

Lower deployment costs and reduced truck rolls

Lightweight enclosure simplifies deployment. Remote reboots between APs and Cable Modem Management minimizes truck rolls

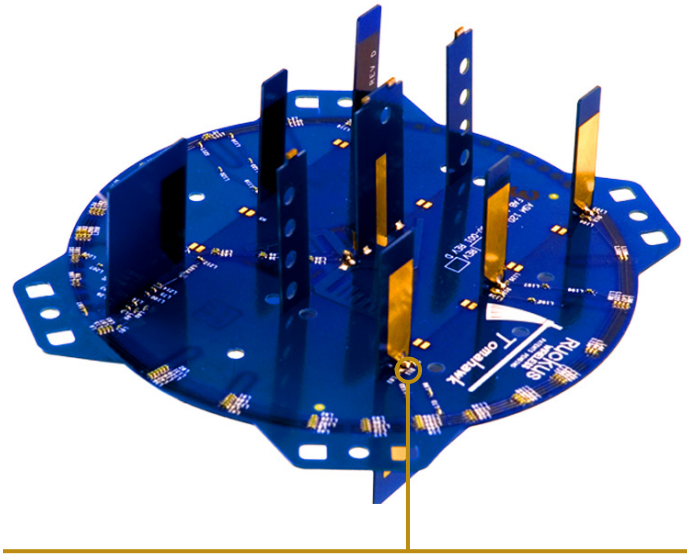
ZoneFlex™ 7761-CM

DUAL-BAND 802.11N SMART WI-FI OUTDOOR AP WITH INTEGRATED DOCSIS 3.0 MODEM

Remote monitoring and network management

The Ruckus 7761-CM can be remotely managed using either the Ruckus Wi-Fi FlexMaster management platform and/or the Service Provider's own Cable Management system to take advantage of the best of both worlds in terms of cable network management and wireless monitoring.

The integrated management approach provides complete network-wide support for Fault, Configuration, and Performance Management. Patent pending software algorithm allows the Ruckus 7761-CM to be remotely controlled from either the Cable MSO management system or from the wireless mesh interface in the case of temporary network interruptions, thereby avoiding expensive and inefficient truck rolls.



A patented smart antenna array integrates six high-gain vertically-polarized and six horizontally-polarized antenna elements. With BeamFlex, this enables up to 4096 potential antenna combinations and up to an additional 6 dB BeamFlex on top of the 5 dBi physical antenna gain, thereby delivering unprecedented range extension and signal reliability. The dual polarized smart antenna increases the effectiveness of spatial-multiplexing, resulting in higher data rates.
